**Answer: A**

**Question 17.**

Software RAID, such as the Linux MD driver, are dependent on CPU as opposed to hardware RAID, which is implemented on the interface controller itself.

- A. True

B. False

**Answer: A**

**Question 18.**

In order to set the time zone to 'US/Eastern' via Kickstart, what must be in the Kickstart configuration file?

- A. tz US/Eastern
- B. timezone US/Eastern
- C. It is not possible to set time zone
- D. timeconfig US/Eastern

**Answer: B**

**Question 19.**

Where do the binaries for XFree86 reside in?

- A. /usr/X11R6
- B. /etc
- C. /etc/X11
- D. /X11R6

**Answer: A**

**Question 20.**

Why might it be insecure to execute the command 'xhost +'?

- A. It enables anyone to connect to your X display
- B. It permits root access on your system
- C. It uses up resources on your system
- D. It allows anyone to rsh into your system

**Answer: A**

**Question 21.**

Which file contains the default system desktop environment?

- A. /etc/X11/XF86Config
- B. /etc/sysconfig/desktop
- C. /etc/sysctl.conf
- D. /etc/sysconfig/displaymanager

**Answer: B**

**Question 22.**

What is the proper boot command to use when performing a Kickstart installation from a floppy where configuration is on the floppy itself?

- A. linux ks=fd0
- B. linux ks
- C. linux ks=floppy
- D. linux ks=ks.cfg

**Answer: C**

**Question 23.**

In order to install all possible packages via a Kickstart installation, what must be in the Kickstart configuration file under the %packages section?

- A. @ All
- B. @ Everything
- C. @ Server
- D. @ GNOME

**Answer: B**

**Question 24.**

In which section of the Kickstart configuration file can post-installation commands be specified?

- A. %packages
- B. %postinstall
- C. %pre
- D. %post

**Answer: D**

**Question 25.**

Apache does not require root to start the server if using ports below 1024.

- A. True
- B. False

**Answer: B**

**Question 26.**

Given a floppy image file 'disk.img', what would be the command to mount this image under /mnt/floppy WITHOUT an actual floppy disk? mount -o loop disk.img /mnt/floppy Name based virtual hosts cannot be configured with SSL in Apache.

- A. True
- B. False

**Answer: A**

**Question 27.**

All times in the DHCP leases file are in EST time zone.

- A. True
- B. False

**Answer: B**

**Question 28.**

First logical partition is assigned the number?

- A. 0
- B. 1
- C. 2
- D. 5

**Answer: D**

**Question 29.**

DNS names in the Apache configuration file should not be configured because?

- A. DNS is very slow
- B. Apache startup could misconfigure virtual hosts if DNS is unavailable
- C. DNS is not supported
- D. Apache cannot perform DNS lookups

**Answer: B**

**Question 30.**

Red Hat Network Administration Tool can configure modem and ISDN devices too?

- A. True
- B. False

**Answer: A**
